● Mounting

- 1) Connect components to the charge controller in the sequence as shown above picture and pay careful attention to the “+” and “-”. Always connect the battery first.
- 2) After connecting the battery, check the battery indicator on the controller, it will be green. If it's not green, please refer to section 4.
- 3) The battery fuse should be installed as close to battery as possible. The suggested distance is within 150mm.

3. Indicators Description and Operation

1) Indicator Status Description

Charging Status LED indicator	Green	On Solid	Normal
	Green	Fast Flashing	Over voltage
Battery Status LED indicator	Green	On Solid	Normal
	Green	Slowly Flashing	Full
	Orange	On Solid	Under voltage
	Red	On Solid	Over discharged
Radix Point of Digital tube (Load indicator)	Red	On Solid	Load ON
	Red	Slowly Flashing	Over Load
	Red	Fast Flashing	Short Circuit

2) Operation

Digital tube Key

The digital tube displays the load work mode. Please refer to the correspondence table of Load Work Mode & LED digital tube value. Press the key to configure the parameter. Please refer to the configuration method below:

- 1) After powering on, disconnect the PV or connect the PV(Voltage<5V) , the light of the digital tube point will turn ON; Connect the PV(Voltage>6V) ,the light of the digital tube point will turn OFF.

- The key can be used to operate switching ON/OFF the load (Manual control mode) or clear the faults.
- Keep pressing the key button over 5s. It will go to parameter browsing mode. Cycle through each parameter item by clicking the button.
- Once the digital tube displays the chosen value, release the key and wait 15s. The digital tube will stop flashing. Configuration has now been updated.

> Load mode

- Manual Control: Control the load via the button.

• Light ON/OFF

• Light ON + Timer

Note: In the mode of Light ON/OFF and Light ON/Timer, the Load is turned on after 10Min. delay.

- Test Mode (Default): Test Mode is the same as Light ON/OFF Mode but no delay.
